Tech Traders E-Commerce System

1. Project Overview

Tech Traders is an e-commerce platform that will allow customers to browse and purchase electronics online. It is meant to be simplistic and user intuitive for ease of use and a rich user experience

---

2. Business Objectives

- Provide a convenient online shopping experience.
- Enable secure customer registration and login.
- Simplify product and order management.
- Help customers compare product prices and find YouTube reviews.

---

3. Software Requirement Specification (SRS)

Functional Requirements

- **User Management:** Register, log in, manage profiles and reset passwords.
- **Product Catalogue:** Browse products, view details and filter by category.
- **Shopping Cart:** Support guest and registered-user carts.
- **Checkout and Payments:** Allow registered customers to complete purchases securely.
- **Order Management:** Allow administrators to update order statuses.
- **AI-Powered Features:** Display competitor prices and relevant YouTube reviews.
- **Administration:** Manage products, customers and orders.
- **Policies:** Provide access to store policies.

Non-Functional Requirements

- Secure authentication and password hashing.
- Responsive and user-friendly interface.
- Reliable database storage.
- Efficient API responses.
- Caching of AI search results.

4. Technology Stack

- **Frontend:** React, TypeScript, Tailwind CSS.
- **Backend:** Python, Flask, Flask-Smorest.
- **Database:** Microsoft SQL Server.
- **Integrations:** Stripe for payments, Cloudinary for blob storage, Tavily for search and Resend for email delivery.

---

5. Intended Users

Customers: Browse products, manage carts, make purchases, and track orders.

Administrators: Manage products and monitor and update customer orders.

---

6. Expected Outcome

A functional, secure and user-friendly e-commerce platform for purchasing technology and electronic products online.
